

EnviroAire™ Formaldehyde-free™ Duct Board

The confidence and value of a quieter and sustainable air duct board.

Increased quality. Increased profits.

EnviroAire Formaldehyde-free™ Duct Board means quieter and consistent comfort for your customers. For your business, installing EnviroAire Duct Board is 25% faster* than the installation of bare sheet metal ducts, which leads to quicker HVAC contractor turnaround.

Assured product protection is a competitive advantage.

The high-performance, high-comfort advantages of EnviroAire Duct Board allows you to differentiate the homes you build as you deliver optimal value to your customers. For peace of mind around indoor air quality, EnviroAire Duct Board is made without formaldehyde. That's important for your customer because the US Environmental Protection Agency (EPA) recommends that you minimize your overall exposure to formaldehyde. The California EPA similarly recommends you use building materials, including insulation, with no added formaldehyde. EnviroAire Duct Board also features our blue EnviroCoate™ Reinforced Coating System—an antimicrobial treatment that protects the product surface from the potential growth of bacteria, mold, and fungus.

The benefits of superior performance.

Research shows that 41% of buyers say they will always pay more for energy-efficient equipment†. EnviroAire Duct Board benefits homeowners through:

- Consistent comfort from room to room
- Higher energy efficiency
- Reduced noise, without the popping and airflow noise common to sheet metal

High-performance ductwork for your HVAC equipment.

EnviroAire Duct Board helps enhance your ability to deliver the benefits of a well-designed, integrated, and high-performance HVAC equipment system throughout the home.

Consistent comfort reduces callbacks.

Homeowners place a high value on the comfort of their home. In a recent American Home Comfort Study conducted by Decision Analyst, 71% of new-construction home buyer callbacks were temperature related. EnviroAire Formaldehyde-free™ Duct Board is designed to solve this problem through consistent room-to-room comfort and reduced HVAC noise in the homes you build.
