JM GlasKap® CR Cool Roof Cap Sheet

On June 1st, Johns Manville will introduce its newest BUR cap sheet, GlasKap® CR. This innovative product will allow JM to lead the way by providing an energy efficient and environmentally responsible product to our customers.

GlasKap® CR is a California Title 24 compliant BUR cap sheet, and is Energy Star, UL and FM approved. This product uses the same installation techniques as our regular GlasKap® and is incredibly cost-competitive. Installation costs are reduced due to GlasKap® CR's factory applied, in-line coating – the product is pre-coated, so application does not require the use of messy spray equipment, and installation time is decreased. GlasKap® CR provides long-term savings for JM's customers as well. This highly reflective, highly emissive cap sheet can help reduce building energy loads during peak hours, leading to lower energy consumption.

JM's GlasKap® CR is currently stocked at our Southgate, CA, Stockton, CA and Oklahoma City, OK locations (product id 3349941). Datasheets, specifications and a summary of approvals are available on the JM website (www.jm.com). Contact your local JM sales representative for more information.

JM understands the value of designing and installing energy efficient, environmentally balanced roofing systems, and anticipates a strong response to GlasKap® CR. Price pages have been published and are currently available to our Pacific District distributors. All remaining districts will receive price pages before June 1st.
