ENERGY 3[®] & ISO 3[™] Polyisocyanurate Insulation Boards
Packaging—Temporary Color Change
Insulation and Cover Board Systems

For an interim time, ENERGY 3 and ISO 3 bundles from Hazleton, Pennsylvania and Jacksonville, Florida will be wrapped in blue plastic instead of our standard white plastic wrap. This change will affect Canada and the Northeast, Midwest, and Southeast districts.

The color change is due to the availability of the pigmented resin in the white opaque film. The new blue film will have exactly the same properties as the white film; the only difference is the color.

No other changes are being made. The clear plastic wrap used to cover the top and bottom of each unit remains the same. 4-foot x 4-foot (1.21-meter x 1.21 meter) boards and 4-foot x 8-foot (1.21-meter x 2.43-meter) boards will continue to be wrapped separately.
