**Johns Manville Nationally Launches the
SeamFree™ Liquid Membrane System**

Johns Manville has developed the ideal roofing solution to meet the challenges many cities face with flat roofs susceptible to standing water as well as the restricted use of asphalt and heat-welding applications.

The SeamFree Liquid Membrane System is a liquid-applied, elastomeric roofing membrane. This proven technology is a tough yet flexible roofing solution that delivers a seamless membrane that can stand the test of time.

Compatible with the PermaFlash® Bituminous Flashing System

The system is designed to work in conjunction with the PermaFlash Bituminous Flashing System. It is perfect for roofs with numerous penetrations since it easily conforms to various shapes and can be applied in tight restricted areas.

The Right Solution for Various Roofing Applications

The SeamFree Liquid Membrane System has a variety of uses where a serious waterproofing membrane is needed.

- Plaza decks
- Garden roofs
- Terraces and balconies
- Areas with many penetrations
- As a cool roof – coat with TopGard® 4000 or TopGard 5000 reflective coatings or apply any SBS or BUR cool roof cap sheet.

Eligible for a 20-year JM Peak Advantage® Guarantee

Any of these applications provide a durable, elastomeric roof system that is eligible for up to a 20-year JM Peak Advantage Guarantee.

This system is now available nationally. Contact your local JM sales representative or customer service advocate to learn more about the SeamFree Liquid Membrane System or visit www.jm.com/roofing to download SeamFree data sheets and resources today!
