Johns Manville Introduces RetroPlus™ Roof Board

Johns Manville is proud to introduce [RetroPlus Roof Board](#) into the cover board product portfolio. Our engineers have been busy upgrading equipment, optimizing processes and improving formulations associated with our workhorse, Retro-Fit™, product. The result of this hard work is the newly-developed RetroPlus Roof Board which offers:

- Improved durability
- High compression and tensile strength compared to wood fiber board
- Excellent water resistance and latent moisture content
- Outstanding fire resistance
- Sustainable product with high post consumer recycled content
- Equivalent codes and approvals to Retro-Fit

Contractors appreciate the improved break-load and compressive strength; less job waste and higher impact resistance to foot traffic during installation.

“We had the opportunity to use the new RetroPlus product on a 126 square BUR job. My crew found the new cover board to be less dusty than other perlite products. The product bonds extremely well to the membrane and the entire system is stronger with the new board. My crew believes that RetroPlus performs better than equivalent wood fiber boards.”

*Isidro Rivera, Foreman
Construction Services (a Tecta America Corp.)
Cumming, GA*

Consultants appreciate the enhanced durability of RetroPlus while maintaining excellent fire resistance, sustainable recycled content and all the FM Global and UL approvals of Retro-Fit. With the improved strength of RetroPlus, Johns Manville is testing for more codes in areas of high wind uplift, cold-applied and single ply applications.

Contact your local JM sales representative or customer service advocate to learn more about RetroPlus Roof Board and look forward, in the coming months, to additional innovations in the cover board product line.
