Asphalt Emulsion Roof Coating to Replace TopGard® Type B

Johns Manville has changed the name of our “TopGard Type B Roof Coating” to “Asphalt Emulsion Roof Coating”. This change is a continuation our new branding for cements and coatings to better communicate the product and its intended use. The TopGard name will continue to be used for our acrylic roof coating product line.

Old TopGard Type B
SKU 70000041

New Asphalt Emulsion
SKU 70000807

[Asphalt Emulsion Roof Coating](#) is an asphalt-based, clay emulsion protective coating for BUR, SBS and APP low-sloped roofs. When cured, the coating permits water vapor to escape while remaining resistant to water penetration. The UV resistance allows this product to be used as a final coating in smooth built-up and modified bitumen membrane systems.

The new Asphalt Emulsion Roof Coating is a direct substitute for TopGard Type B and can be used wherever TopGard Type B is specified. Specifications include:

- ASTM D 1227, Type II, Class 1 (Asbestos Free)
- ASTM 1187, Type I
- SS-R-1781, MIL-R-3472A

Continue placing orders for TopGard Type B (#70000041) until the remaining inventory is depleted. Once the current inventory is depleted, orders should be placed for Asphalt Emulsion (#70000807).

Asphalt Emulsion Roof Coating will be stocked at the Johns Manville Macon, Georgia location only.
