**Updated Tapered Design Process**

To better serve our customers in a timely and efficient manner, Johns Manville has created a defined process, and for the first time, is offering an on-line electronic form to help collect the important details and information needed to deliver a customized tapered quote.

To allow sufficient time prior to the bid deadline, Johns Manville recommends all documentation and required forms be delivered at least **six (6) business days prior to the bid deadline**. As a reminder, we need a minimum of **three (3) business days** to turnaround a tapered quote.

The link to submit information is:

[Tapered Design Quote – http://www.specjm.com/commercial/roofing/taperedsystemsquote.asp](http://www.specjm.com/commercial/roofing/taperedsystemsquote.asp)

This on-line form will walk you through the following design criteria, allowing you to easily communicate your project/layout requirements.

- Material to be used
- Slope
- Thickness
- R-value
- Fill
- Deck
- Base layer
- Compressive strength requirements
- Roof membrane system

By utilizing this process, Johns Manville can improve accuracy and provide quicker turnaround time by reducing the amount of time spent on research and follow up. We will continue to do our best to accommodate last minute requests; however we appreciate your consideration for the lead times described.

If you have any questions regarding the new process, please contact the tapered design group at (800) 341-8032.
